| Project Name  | Smart Lender |
| Maximum Marks | 3 Marks      |

**Define Problem Statements (Customer Problem Statement Template):** Create problem statements from the perspective of the primary users of the Smart Lender system. These statements help identify customer needs and guide the development of an intelligent loan eligibility prediction platform.

#### Customer Problem Statements

| Problem Statement (PS) | I am (Customer)                                | I'm trying to                                          | But                                                              | Because                                                                            | Which makes me feel                                           |
|------------------------|------------------------------------------------|--------------------------------------------------------|------------------------------------------------------------------|------------------------------------------------------------------------------------|---------------------------------------------------------------|
| PS-1                   | A loan applicant seeking financial assistance. | Know whether I am eligible for a loan before applying. | The approval process is slow and depends on manual verification. | My income, credit history, education and loan details must be evaluated carefully. | Uncertain about whether my loan application will be approved. |
| PS-2                   | A credit officer in a bank.                    | Evaluate loan applications quickly and accurately.     | Manual verification takes significant time and effort.           | Many applications need to be processed while minimizing default risk.              | Pressured to make fast and reliable decisions.                |
| PS-3                   | A financial analyst.                           | Assess applicant risk efficiently during peak periods. | Reviewing every application manually is difficult.               | The institution requires accurate, data-driven predictions.                        | Confident when supported by machine learning recommendations. |
