

Communication

Date	04-uly-2026
Team ID	XXXXXX
Project Name	Smart Lender
Maximum Marks	1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp	Mungari Samuel Abhishek, (Coordinator)- Sathvika Kolamudi, Veera Lakshmi Malladi	Quick status checks to track current daily coding blockers, variable names sync, and notebook cell progress.
2	Progress Update	Weekly	GitHub / Zoom	Full Team	Lead coordinator reviews code updates, pushes changes to the repository, and reviews current phase template completions.
3	Issue / Bug Discussion	As Needed	VS Code Live Share / WhatsApp Call	Full Team	Immediate debugging of runtime model scaling parameters, shape errors, and unpickling path mismatches.
4	Final Demo Rehearsal	Once	Local Host Server Environment/ Google Meet	Full Team	Comprehensive walkthrough of the full pipeline (from inputs to results) to ensure smooth delivery. To decide who will be the final presenter of the demo video.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Repetitive Preprocessing Block Overwrites: Team members experienced code friction where individual variables for scaled parameters (x_bal) were repeatedly overwritten and discarded in the Jupyter space, risking data confusion.	Action Taken: Lead coordinator Sathvika intervened to standardize variable syntax. The pipeline was simplified into a single sequential flow—running SMOTE balancing first and Scikit-Learn StandardScaler transformations second.
2	Broken Path Routing Exceptions: Moving source structures out of sub-folders caused model loading crashes because the server was trying to reach unmapped directories (../Flask/rdf.pkl).	Action Taken: Team synchronized directory hierarchies instantly via group messages. Path parameters inside pickle.dump() and pickle.load() blocks were completely stripped of directory prefixes, shifting files directly into a single unified root layer.
3	Data Format Integration Skew: Passing raw front-end dropdown values caused calculation exceptions in the Random Forest tree splits due to string-to-numeric format mismatches.	Action Taken: Team mapped index values directly to HTML option tags while implementing explicit numerical data casting boundaries (float()) inside app.py to securely filter input arrays before inference.
