

Demonstration of Proposed Features

Date	04-July-2026
Team ID	XXXXXX
Project Name	Smart Lender
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Web Interactive Terminal Portal	A secure and modern corporate welcome screen introducing the automated credit risk scoring framework.	Implemented	Yes	Successfully verified locally. Operates smoothly under the home.html rendering block via the root route context.
2	Dynamic Risk Telemetry Capture	A multi-column responsive desktop input grid with built-in format validations to capture 11 unique financial and demographic inputs.	Implemented	Yes	Natively locks field requirements using browser form boundary rules within the input.html component.
3	Underwriting Pipeline Routing	Backend server control layout to securely process client forms, assign inputs, and prepare multidimensional data arrays.	Implemented	Yes	Executed seamlessly inside app.py under the dedicated POST /submit route block.
4	Dynamic Feature Standardization	Live normalization of continuous and categorical vector dimensions matching original model properties.	Implemented	Yes	Enforced with absolute consistency using the pre-trained and unpickled Scikit-Learn scale1.pkl transformation binary.
5	Ensemble Machine Learning Classifier	Highly generalized predictive matrix engine processing data variables to generate a definitive label split.	Implemented	Yes	Managed via a robust, pre-trained Random Forest Classifier frozen into the local workspace memory layer as rdf.pkl.

6	Context-Aware Result Dashboard	Smart outcome delivery console that automatically shifts structural styles and text alerts depending on predictions.	Implemented	Yes	Built completely inside output.html using conditional Jinja2 markup tags to dynamically toggle approved/disapproved design states.
